SKILLS

SOC & Security Tools: Wazuh, ELK, Splunk, IBM QRadar, Microsoft Sentinel, Suricata, Snort, Wireshark, YARA, Sigma, Sysmon, Burp Suite, Metasploit, OSQuery, Velociraptor

Monitoring & Logging: Alert Triage, Incident Escalation, IOC Analysis, Log Analysis, SIEM Monitoring, Threat Hunting, Malware Investigation, MITRE ATT&CK Mapping

Automation & SOAR: Python Playbooks, n8n, DFIR-IRIS, TheHive, Shuffle, Cortex

Infrastructure & DevOps: Docker, Kubernetes, Ansible, HAProxy, Nginx, Keepalived, AWS, Proxmox, VMware

Languages: Python, Bash, PowerShell, C, Go, Rust

Operating Systems: Linux, Windows Server, Active Directory

Frameworks: MITRE ATT&CK, NIST CSF, Cyber Kill Chain, Zero Trust, OWASP Top 10

EDUCATION

Bachelor of Science in Computer Science & Engineering
Green University of Bangladesh
2021 – 2025

Thesis: NeuroCrypt – A Privacy Preserving Federated Learning Framework for Secure Brain-Computer Interface Data Sharing

LEARNING & NETWORKING

AbuSaeid
ABUSAEID
SaeidSec

LANGUAGE

- Bengali (Native)

SUMMARY

SOC Analyst (L1) and Incident Responder with hands-on experience in security monitoring, alert triage, incident investigation, and SIEM engineering. Skilled in threat detection, log analysis, threat hunting, and detection engineering using Wazuh, Elastic Stack, Splunk, IBM QRadar, Microsoft Sentinel, OpenCTI, and MISP. Experienced in building enterprise-grade SIEM solutions, integrating threat intelligence platforms, and automating SOC workflows using Python and n8n to improve detection capabilities and operational efficiency.

WORK EXPERIENCE

● SOC INTERN

Cyber Academy, Pakistan [Remote Internship]

08/2025 – 09/2025

- Monitored and analyzed security events using Wazuh SIEM, performing log analysis and alert triage on Windows Event Logs and Sysmon data to identify potential threats and anomalous activity.
- Enhanced detection accuracy by 40% through SIEM rule tuning, correlation logic refinement, and false-positive reduction.
- Developed and documented incident escalation procedures, improving response consistency and team coordination.
- Supported endpoint monitoring and threat detection efforts across managed environments.

● CYBERSECURITY INTERN & ASSOCIATE MEMBER

Center for Cyber Security Studies & Research [Remote Internship; Lifetime Associate Member Since 04/2026]

04/2024 – 08/2024

- Collaborated with researchers analyzing IoT vulnerabilities, contributing to security research.
- Deployed Wazuh and ELK Stack, monitoring 50+ daily security events for real-time threat detection.
- Presented threat landscape findings to internal teams, enhancing awareness of emerging attack vectors.
- Active lifetime associate member (ID: SSF-A-2026-0063) engaged in cybersecurity research, knowledge sharing, and professional community initiatives.

VOLUNTEERING

Mentor

GUCC Cyber Security Society

May 2024 – Present

- Cybersecurity workshop training
- Resource making, Content making
- Lab creating, solving

Content Creator [Cybersecurity]

YouTube – Bytes & Belief

CO-CURRICULAR ACTIVITIES

- Platforms:** CTF Player, TryHackMe, Hack The Box, LetsDefend, CyberDefender

CERTIFICATION

- **Blue Team Junior Analyst** – Security Blue Team
- **ISO/IEC 27001:2022 Lead Auditor** – Mastermind
- **Practical Ethical Hacking** – TCM SECURITY
- **Mastering Cyber Threat Intelligence for SOC Analysts** – SOCRadar® Extended Threat Intelligence
- **SOC Level 1** – TryHackMe
- **Linux/Windows Privilege Escalation for Beginners** – TCM SECURITY

TOOLS

- **Network Forensics:** Wireshark, Zeek, Suricata, Snort
- **SIEM:** Wazuh, ELK (Elastic Stack), Splunk, IBM QRadar, Microsoft Sentinel
- **SOAR:** TheHive, Shuffle, Cortex, DFIR-IRIS
- **Forensics:** Velociraptor, YARA, Sigma, OSQuery
- **Malware Analysis:** YARA, VirusTotal, ANYRUN Sandbox
- **EDR:** Velociraptor, Sysmon
- **Threat Intelligence:** MITRE ATT&CK, OSINT Framework, VirusTotal, MISP, OpenCTI
- **IPS/IDS:** Snort, Suricata, Zeek
- **Automation:** Python, n8n, Ansible

PROJECTS

1. Wazuh + OpenCTI: Bidirectional Threat Intelligence Pipeline [🔗](#)

Summary: Designed and deployed a bidirectional integration between Wazuh SIEM and the OpenCTI platform to automate real-time IOC matching, contextual enrichment, and incident alerting.

- Developed a Phase 1 CDB (Constant Database) list ingestion pipeline using the pycti SDK to synchronize indicators of compromise (IOCs) from OpenCTI to the local Wazuh manager every 6 hours.
- Engineered a Phase 2 live integration executing real-time, concurrent GraphQL API queries to fetch threat actor profiles, TTPs, and MITRE kill chain context directly from OpenCTI.
- Completed the bidirectional feedback loop by designing an automated mechanism that registers STIX sighting relationships on the OpenCTI Evidence Ledger when Wazuh triggers a detection.
- Built a notification pipeline that defangs network indicators and dispatches high-confidence security alerts containing full context to a dedicated SOC Telegram channel.
- Stack: Wazuh · OpenCTI · Python · GraphQL · pycti SDK · Telegram Bot API

2. Unified SOAR Platform — Automated Threat Detection & Response [🔗](#)

Summary: Designed and deployed an end-to-end, open-source SOAR platform integrating Suricata IDS, Wazuh SIEM, TheHive, Cortex, MISP, and OpenCTI — all containerized with Docker.

- Designed and deployed an end-to-end, open-source SOAR platform integrating Suricata IDS, Wazuh SIEM, TheHive, Cortex, MISP, and OpenCTI — all containerized with Docker.
- Automated observable enrichment via VirusTotal, AbuseIPDB, MISP, and OpenCTI, reducing MTTD and MTTR.
- Stack: Cortex · TheHive · OpenCTI · MISP · Docker · Wazuh · Suricata

3. Project Aegis-OCSF: Scalable Security Pipeline (Wazuh to ClickHouse) [🔗](#)

Summary: Engineered a high-performance security data pipeline using Rust and ClickHouse to bridge Wazuh SIEM and OCSF standardized telemetry.

- Developed a multi-threaded Rust ETL engine to normalize Wazuh alerts to OCSF 1.7.0 under 1ms.
- Optimized ClickHouse columnar storage, achieving 30x compression and sub-second queries on billions of events.
- Standardized heterogeneous logs into OCSF to enable threat hunting and cross-platform analytics.
- Integrated SQL-native Grafana dashboards to visualize ingestion rates, storage, and MITRE ATT&CK behavior.

4. Advance Malware Analysis MCP Server [🔗](#)

Summary: Developed a secure MCP server for AI-assisted malware analysis, providing real-time threat intelligence, malware metadata, and IOC enrichment.

- Integrated MalwareBazaar, VirusTotal, and Telegram to support triage, reputation checks, and YARA alerting.
- Hardened platform security via path traversal protection, API rate limiting, and restricted local file hashing.

5. eBPF-Sentry: Linux Kernel Security System [🔗](#)

Summary: Built high-performance eBPF-based IDS/IPS for syscall-level threat detection.

- Implemented real-time active defense and process termination capabilities.
- Designed stateful behavioral detection for multi-stage attacks with hot-reloadable rules.

6. Network Traffic Monitoring and Analysis System [🔗](#)

Summary: Developed a full-stack network traffic analysis platform supporting both live capture and offline PCAP-based investigation for rapid threat identification.

- Implemented deep packet inspection using Scapy and Wireshark with a real-time monitoring dashboard.
- Automated protocol classification, port enumeration, and endpoint behavioral analysis to accelerate threat identification.

7. Enterprise-Grade Wazuh SIEM Deployment with High Availability in Docker

Summary: Architected and deployed a production-ready, fault-tolerant Wazuh SIEM platform with OpenSearch on Docker, designed for continuous SOC operations, high-volume log ingestion, and end-to-end security observability.

- Deployed clustered Wazuh managers and redundant OpenSearch indexer nodes to ensure uninterrupted log ingestion, search, and real-time analysis during service disruptions.
- Configured Keepalived floating VIPs and HAProxy load balancing to eliminate single points of failure and maximize platform availability.
- Hardened agent-to-manager communication by implementing a secure log ingestion pipeline with a custom reverse proxy and mutual TLS (mTLS) authentication.
- Integrated Prometheus, Grafana, Zabbix, and DFIR-IRIS for full-stack observability covering infrastructure health, security metrics, and incident response workflows.
- Deployed honeypots and automated vulnerability scanning to broaden detection coverage and enrich threat intelligence context across the environment.
- Conducted failover simulation and disaster recovery testing to validate platform resilience and ensure continuous SOC monitoring operations.

8. Enterprise-Grade Wazuh SIEM Platform with High Availability

Summary: Designed and deployed a production-ready, high-availability Wazuh SIEM platform to deliver resilient security monitoring, centralized log management, and continuous SOC operations.

- Implemented a clustered Wazuh architecture with Master-Worker nodes for scalable event processing and fault tolerance.
- Designed multi-layer load balancing and automated failover using Nginx, HAProxy, Keepalived, and floating VIPs.
- Eliminated single points of failure across log ingestion, management, and monitoring services.
- Integrated OpenSearch for centralized storage, indexing, and real-time security analytics.
- Conducted failover and resilience testing to validate continuous monitoring during service disruptions.
- Stack: Wazuh, OpenSearch, HAProxy, Keepalived, Nginx, Ubuntu Linux
