Professional Summary

SOC Analyst and Incident Responder with hands-on experience in security monitoring, alert triage, and SIEM engineering across L1/L2 SOC operations. Skilled in threat detection, log analysis, and incident investigation using Wazuh, Elastic Stack, Splunk, and IBM QRadar. Proven expertise in building enterprise-grade SIEM architectures, threat hunting, and detection engineering aligned to MITRE ATT&CK. Strong background in automation using Python and n8n to reduce false positives and improve MTTR through ML-driven anomaly detection pipelines.

Experience

SOC Intern – Cyber Academy, Pakistan

Aug 2025 – Sep 2025

- Performed SIEM operations using Wazuh correlating Windows Event Logs and Sysmon data
- Improved alert accuracy by 40% through enhanced correlation rules and detection tuning
- Developed incident escalation procedures and endpoint monitoring capabilities

CyberSecurity Intern – Center for Cyber Security Studies & Research

Apr 2024 – Aug 2024

- Collaborated with researchers analyzing IoT vulnerabilities, contributing to 3 security reports
- Deployed Wazuh and ELK Stack monitoring 500+ daily security events for threat detection
- Presented threat landscape findings enhancing team awareness of emerging attack vectors

Projects

Project Aegis-OCSF: Scalable Security Pipeline (Wazuh to ClickHouse)

2026

- Engineered a high-performance security data pipeline using Rust and ClickHouse to bridge the gap between Wazuh SIEM and OCSF standardized telemetry
- Developed a custom, multi-threaded Rust-based ETL engine to normalize raw Wazuh alerts into the OCSF 1.7.0 schema with sub-millisecond latency
- Implemented columnar storage optimization in ClickHouse (MergeTree), achieving a 30x compression ratio and sub-second SQL query performance on billions of security events
- Standardized heterogeneous security logs into the Open Cybersecurity Schema Framework (OCSF) to enable seamless threat hunting and cross-platform analytics
- Integrated SQL-native Grafana dashboards for real-time visualization of ingestion rates, storage efficiency, and MITRE ATT&CK actor behavior

Malware Analysis MCP Server

2026

- Developed a secure MCP server for AI-assisted malware analysis, delivering real-time threat intelligence, malware metadata, and IOC enrichment for defensive security workflows
- Integrated MalwareBazaar, VirusTotal, Telegram, and offline analysis tools to support sample triage, hash reputation checks, IOC extraction, YARA generation, and alerting
- Strengthened platform security through path traversal protection, API rate limiting, restricted local file hashing, and a design that disables live malware binary downloads by default

Enterprise-Grade Wazuh SIEM Deployment with High Availability in Docker

2025

- Engineered a high-availability Wazuh and OpenSearch SIEM environment for scalable, fault-tolerant security monitoring
- Deployed clustered Wazuh managers and redundant indexer nodes to ensure reliable log ingestion, search, and analysis during service disruptions
- Configured Keepalived floating VIPs and load balancing to eliminate single points of failure and strengthen platform resilience
- Hardened agent communication by building a secure log ingestion pipeline with a custom proxy and mutual TLS authentication
- Implemented Prometheus, Grafana, Zabbix, and DFIR-IRIS for end-to-end observability, infrastructure monitoring, and incident workflow visibility
- Integrated honeypots and vulnerability scanning to expand detection coverage and enrich threat intelligence context
- Conducted failover and disaster recovery testing to verify resilience and maintain uninterrupted SOC operations

eBPF-Sentry: Linux Kernel Security System

2025

- Built high-performance eBPF-based IDS/IPS for syscall-level threat detection
- Implemented real-time active defense and process termination capabilities
- Designed stateful behavioral detection for multi-stage attacks with hot-reloadable rules

Enterprise-Grade Wazuh SIEM with Advanced Load Balancing and High Availability

2024

- Engineered and manually deployed a high-availability Wazuh SIEM platform with multi-node clustering, load balancing, and fault-tolerant design for resilient security operations
- Integrated HAProxy, Keepalived, Nginx Stream, clustered Wazuh managers, and redundant indexer nodes to eliminate single points of failure and sustain reliable log processing
- Performed failover testing under simulated node outages to verify uninterrupted agent communication, continuous event ingestion, and stable dashboard availability

Network Traffic Monitoring and Analysis System

2023

- Developed full-stack network traffic analysis platform supporting live and PCAP analysis
- Implemented deep packet inspection using Scapy and Wireshark with real-time dashboard
- Automated protocol, port, and endpoint analysis for rapid threat identification

Education

Bachelor of Science in Computer Science & Engineering – *Green University of Bangladesh*

Feb 2021 – Dec 2025

Thesis: NeuroCrypt – A Privacy Perserving Federated Learning Framework for Secure Brain-Computer Interface Data Sharing

Technical Skills

SOC & Security Tools:	Wazuh, Elasticsearch (ELK), Splunk, IBM QRadar, Microsoft Sentinel, Suricata, Snort, Wireshark, YARA, Sigma, VirusTotal, Sysmon, Burp Suite, Metasploit, OSQuery, Velociraptor, The Hive,Shuffle,Cortex
Monitoring & Logging:	Log Analysis, SIEM Operations, Alert Correlation, Threat Hunting, Filebeat, Zeek
Automation & SOAR:	Python Playbooks, n8n, DFIR-IRIS
Infrastructure & DevOps:	Docker, Kubernetes, Ansible, HAProxy, Nginx, Keepalived, AWS, Proxmox, VMware
Operating Systems:	Linux, Windows Server, Active Directory
Languages:	Python, Bash, PowerShell, C, C++, Java, Go, eBPF (BCC)
Frameworks:	MITRE ATT&CK, NIST CSF, Cyber Kill Chain, Zero Trust, OWASP Top 10
Platforms:	TryHackMe, Hack The Box, LetsDefend , CyberDefender

Certifications

- **Blue Team Junior Analyst**
- **ISO/IEC 27001:2022 Lead Auditor**
- **Practical Ethical Hacking - The Complete Course**
- **Mastering Cyber Threat Intelligence for SOC Analysts**
- **SOC Level 1 Learning Path, TryHackMe**
- **Linux/Windows Privilege Escalation for Beginners**
